## Home Prices Rise in 2007

Prices of single-family, re-sale homes and condos continued to rise in 2007. Of course, the numbers are a bit deceptive, especially in this market. The number of home sales above \$1,000,000 has become an increasingly larger percentage of total home sales. This has the effect of skewing the numbers upward.

The median price for single-family homes in 2007 was \$936,000, a gain of 7.7% over 2006. The average price gained 7.4% to 1,209,838. There was no month in which the year-over-year median price difference was negative.

The median price for condos rose 8.9% to \$599,000 over 2006 and the average price gained 5.6% to \$616,689.

Inventory was lower last year compared to 2006. The number of new listings that came to market last year was 3.5% lower than

the year before for homes, and down 12.1% for condos.

The story of the year was the credit crunch. It slashed demand to the bone. Gone are 100% mortgages and no-doc mortgages. The tightening of underwriting has caused many people not to qualify for a home loan.

Sales were already weak before the credit crunch, but afterwards, they went into free-fall. Home sales were off 16.7% year-over-year. Not bad considering the 30% plus drop in Santa Clara

County. Condo sales were down 27%. This is now the third year in a row home and condo sales have fallen. I expect we're nearing the bottom of the market, although we probably won't see much of a pick-up until the second half of the year.

## C.A.R.'s California Housing Market Forecast for 2008

### Statewide median price down, pace of sales decline moderates after tumultuous 2007

Home prices throughout most of California will post modest declines next year while sales of existing homes will stabilize from the precipitous decrease experienced in 2007, according to the CALIFORNIA ASSOCIATION OF REALTORS® (C.A.R.) "2008 California Housing Market Forecast".

The median home price in California will decline 4 percent to \$553,000 in 2008 compared with a projected median of \$576,000 this year, while sales for 2008 are projected to decrease 9 percent to 334,500 units, compared with 367,500 units (projected) in 2007.

"Tighter credit standards, affordability concerns, and a continued standoff between buyers and sellers will contribute to continued weak-

ness in the market going into next year," said C.A.R. President Colleen Badagliacco. "Now is not the time for homeowners to 'test the waters' – only serious sellers should put their homes on the market in what will continue to be a challenging sales environment."

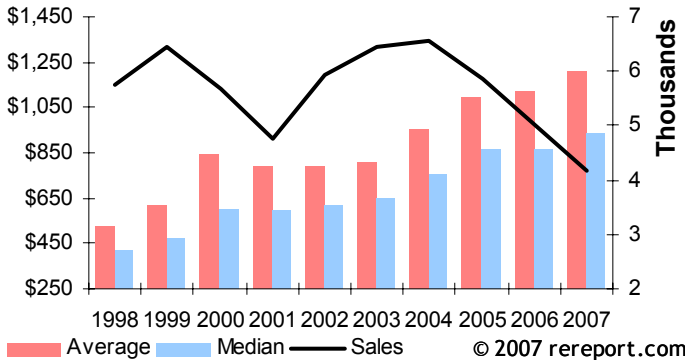

"Sales could decline more steeply in 2008 if the current liquidity crunch in the mortgage markets has

(Continued on page 18)

## C.A.R.'s California Housing Market Forecast for 2007

(Continued from page 1)

a longer-than-expected duration or if interest rates unexpectedly increase," she said

"Geographically, more affordable regions such as the Central Valley and Inland Empire will experience greater softness in the resale market because of the large number of new homes coming onto the market in recent years," said C.A.R. Vice President and Chief Economist Leslie Appleton-Young. "Higher priced regions of the state, such as the San Francisco Bay Area and parts of San Diego, Los Angeles, and Orange counties will react more to affordability constraints."

"By price-range, the highest-priced markets – those with medians over \$1 million -- will show less stress," she said. "The lower-priced markets

will continue to face fallout from the subprime crisis, tighter underwriting standards, and competition from new home developments where price-cutting has been even more severe."

C.A.R. economists also projected a 23 percent decline in sales this year to 367,500 units compared with 2006, and a 3.5 percent increase in the statewide median price to \$576,000. However, the projected increase in the 2007 statewide median stands in contrast to the situation in most counties, regions, and communities of the state, where slight to modest year-to-year percentage declines have become more prevalent and will continue next year.

Historically, the last time the sales level fell below 2007's projected 367,500 units occurred in 1995,

when annual sales totaled 342,540 units. Sales last fell below 2008's 334,500-unit forecast in 1985, with 328,270 units. The last time the statewide median price fell was a 0.5 percent decline in 1996. The most recent statewide median price decline greater than 4 percent was a 4.5 percent decline in 1993.
